DEUSEX
MECHA
HEAVY METAL MOBILE ENVIRONMENTS FOR DAGGERHEART
DAGA CLUB

DIFFICULTY CORRELATES TO MECHA SIZE:
15 SoloFrame, 20 DuoFrame, 25 Squadframe

DIFFICULTY

- All damage from non-MEGA sources is reduced to Minor Damage.
- Conversely, attacks made by MEGAS against non-MEGAS are treated as Severe Damage.
- While piloting a Mecha, your Evasion is replaced by its Difficulty and are considered MEGA

MEGA SUIT

The mecha's systems are powered by a unique engine called a FUSIONHEART, a device that creates a temporary symbiotic bond in which the pilot acts as both generator and conduit for its power flow.

- To power up and control the Mecha, each pilot must spend 3 Hope to energize its systems. The Mecha then gains 2 Power tokens per Hope spent.
- All Power tokens are pooled and shared among all active pilots.
- The Mecha's Power Pool can hold a maximum of 6 tokens per pilot.

While actively bonded with their Mecha, a pilot can Reroute their power directly within the FUSIONHEART. They make Action Roll vs. the Mecha's Difficulty to replenish Power Tokens:

- ROLL W/ HOPE: Regain 2 Power tokens.
- ROLL W/ FEAR: Burn 1 Power Token.
- CRIT: Your Power Token Pool becomes six.

FUSIONHEART

BURN represents both the stress absorbed by the frame and the power consumed to keep it operational.

- When a Mecha takes damage, BURN 1 Power token for Major Damage and 2 for Severe Damage.
- If its Power Pool is reduced to 0, the Mecha becomes BROKEN (X). While BROKEN, the Mecha is unusable until repaired.
- During Downtime, players may repair their mecha as a Project, ticking the BROKEN countdown by 1 on a success. Repair rolls require either a Chest of Gold or a Mecha Part, which is only consumed on a successful roll.

BURN

MODULAR SYSTEMS

The number of systems a mecha can operate is determined by its size: Solo Frame: 1 + Tier | Duo Frame: 2 + Tier | Squad Frame: 3 + Tier
A single modular system may be swapped out for another of your choice as a Downtime action during a Long Rest.

BEAM SWORD

Burn 1 Power token to automatically damage a target within melee range.

FLIGHT THRUSTERS

Burn 1 Power token to move to any location within Very Far range.

STEALTH MODE

Burn 1 Power token to cloak your mecha, becoming Hidden until you take an Action or Move Under Pressure. Rolls made in Stealth Mode have Advantage.

BALLISTIC BARRAGE

Burn 2 Power tokens to fire a barrage of projectiles. Roll 1d6 and deal damage to that many targets within Far range.

OVERCLOCK

When you roll with Fear, burn 2 Power tokens to prevent the GM from gaining that Fear from the roll or the spotlight. The GM may still spend Fear to Interrupt.

ACTIVATING THESE SYSTEMS REQUIRES NO ACTION OR REACTION ROLL.

COUNTERMEASURES

Burn 2 Power tokens to turn a successful roll against you into a failure. No Hope or Fear is gained.

SIEGE ENGINES

Burn 3 Power tokens to destroy a vehicle or structure with a Difficulty lower than the mech's.

OVERSHIELD

Burn 3 Power tokens to generate an impenetrable force field. While active, when you would take damage, roll 1d4. On a 2–4, you take no damage instead.
On a 1, the overshield collapses, and you take Severe Damage.

CHARGED BEAM

Burn 1 Power token to aim at a target and start a Countdown (6). Each time that target is Spotlighted, reduce the countdown by 1. When the countdown reaches 0, the target takes 1d6 direct HP damage.

When activating this system, you may Burn additional Power tokens to reduce the countdown by 1 for each token spent.

KAIJU

Kaiju are monsters that tower over cities and are nigh indestructible due to the sheer scale of their massive size. In addition to being considered MEGA, they also gain the following features:

KING OF MONSTERS — Passive: Kaiju are highly territorial and will always prioritize attacking any targets with the MEGA tag over other goals or instincts. They always fight to the death.

FEAR INCARNATE — Passive: Any time damage would be dealt to the Kaiju, the GM may spend 1 Fear instead of marking HP.

SIEGE MONSTER — Action: Spend 1 Fear to destroy a building or vehicle without the MEGA tag.

When two opponents both have the MEGA tag, they interact normally, as they are on the same scale of size.
The modular systems Beam Sword and Ballistic Barrage deal Minor Damage to adversaries with the MEGA tag.

MEGA VS MEGA

USING YOUR MECHA

Mecha draw their power from their pilots, and as a result their aesthetics and armaments will shift from host to host.

Any ability or spell you can perform can also be performed while piloting a Mecha.

Give your Mecha personality and flair that reflect your own unique abilities and sensibilities.

MECH-FINDER

Mecha lie buried in the TechWaste, their locations hidden in ancient databases or bound to special relics.

Blueprints or Damaged Frames create a Countdown that is reduced by collecting Parts or Schematics (1 per item). At zero, the Mecha is restored and ready to bond with a pilot.

FEAR MOVIES

Example Uses of Fear When Dealing with Mecha:

- System Surge (1 Fear): Pilots must succeed on a Reaction roll or mark 1 Stress.
- Power Cycle (1 Fear): Modular systems are offline until a pilot rolls with Hope.
- Exploding Console (2 Fear): Pilots must succeed on a Reaction roll or take Minor Damage.
- Short Circuit (2 Fear): Choose a modular system. Pilots must make a successful Action roll to use it, in addition to its normal Burn cost.
- Overheated (3 Fear): All Burn costs are doubled until a pilot rolls with Hope.
- Heartbroken (4 Fear): The FUSIONHEART is damaged and cannot generate new Power tokens until patched. Create a Countdown (3). A successful Action roll reduces it by 1. At zero, the FUSIONHEART is functional again.
